SERVALL-STAZDRY**The New Type
SANITARY LITTER****For Poultry, Cattle, Horses and Pets****Protects Baby Chicks Against
DAMPNESS and COCCIDIOSIS**

Servall-Stazdry safeguards against dampness in the brooder house and is an important aid in preventing and controlling coccidiosis. Its light color makes it easy to detect any irregularities in the color of the droppings.

In preparing the brooder house for baby chicks, the floor should be covered with the litter to a depth of not more than 1" to 1½". The depth will increase with use. Cloth bags or paper should be placed over the litter for the first few days. By daily stirring Servall-Stazdry with a fork, you hasten evaporation, helping to keep the litter dry which is one of the best safeguards against coccidiosis. Properly used, Servall-Stazdry will last from 4 to 12 weeks depending upon the number of chicks, weather, laxative effect of feed, heat and ventilation.

***"I Would Never
Try to Feed
Cattle
Without It"***

—says Perry Workley

Perry Workley of Blanca, Colo., has been feeding beef cattle for 20 years. He's famous as a feeder and a showman. And he thinks Calf Manna is really great. "There's a vitalizing something about it that works wonders with calves," says he. And there are hundreds of others, small farmers, big ranchers, feeders of rabbits, goats, hogs, sheep, horses, cattle, etc., who agree. We sell Calf Manna and we recommend it
